THE EXCRETORY SYSTEM

HUMAN BODY *What each part does*

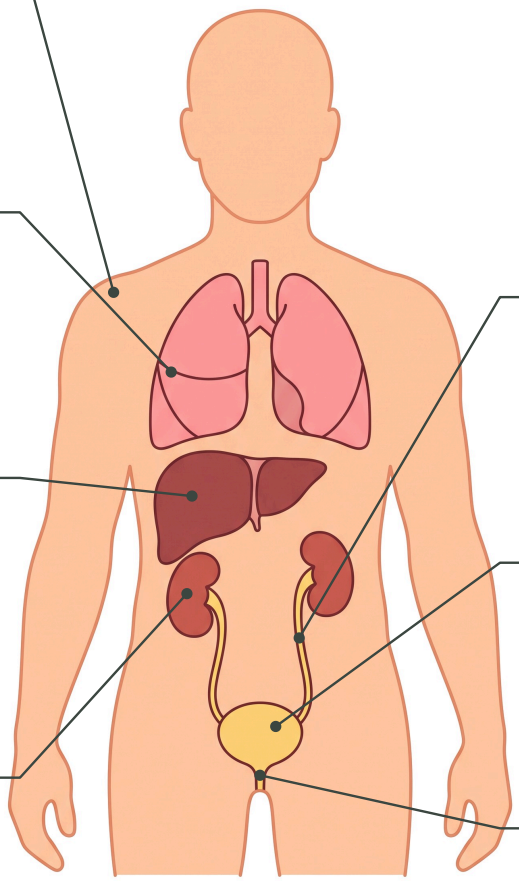

The excretory system removes the waste that builds up as the body does its daily work.

Skin
Releases water, salts and a little urea in sweat.

Lungs
Remove carbon dioxide, a waste gas, when you breathe out.

Liver
Changes harmful wastes in the blood into forms the body can remove.

Kidneys
Bean-shaped organs that filter waste and extra water from the blood to make urine.

Ureters
Two tubes that carry urine down to where it is stored.

Urinary Bladder
A muscular bag that stores urine until it leaves the body.

Urethra
The tube that carries urine out of the body.
