Rounding: How It Works

Rounding to the nearest ten and the nearest hundred.

Rounding means finding the closest ten or hundred

47 is between 40 and 50.

It is closer to 50, **so 47 rounds to 50.**

A number exactly halfway rounds up

350 is exactly halfway between 300 and 400.

350 rounds to 400.

Rounding without a number line

1. Find the place you are rounding to.
2. Look at the digit just to its right.
3. If that digit is 0, 1, 2, 3 or 4, the place stays the same.
4. If it is 5, 6, 7, 8 or 9, the place goes up by one.
5. Every digit to the right becomes 0.

nearest hundred **362** → **400** nearest ten **362** → **360**

Green: the place you are rounding to. Orange: the digit that decides.

A rhyme to remember it

Five or more, raise the score.

Four or less, let it rest.
