PARTS OF THE BRAIN

HUMAN BODY *What each part does*

The brain has several main parts, and each one has its own jobs. Together they control everything you think, feel and do.

Frontal lobe
Handles thinking, planning, decisions and the movements you choose to make.

Temporal lobe
Handles hearing and understanding language, and helps form memories.

Brain stem
Connects the brain to the spinal cord and controls automatic jobs like breathing and heartbeat.

Parietal lobe
Processes touch and temperature and keeps track of where your body is in space.

Occipital lobe
Processes what your eyes see.

Cerebellum
Controls balance, coordination and smooth movement.
