Pangaea with Today's Countries

Today's country borders drawn on Pangaea, 250 million years ago. The countries did not exist then: the borders show where the land that became each country was. Small pieces (parts of Asia, Central America, islands) were still scattered in the oceans and joined later.

North America | South America | Europe | Africa | Asia | India (part of Asia today) | Australia | Antarctica

Plate model: Merdith et al. (2021) via GPlates (EarthByte). Coastlines: Natural Earth.
